

# Certified Clinical Research Coordinator (CPI®) Examination Detailed Content Outline

*(Effective October 2019)*

This document contains the Detailed Content Outline (DCO) for the Principal Investigator Examination. Each question on the exam is based on this outline.

## Introduction

The CPI program is accredited by the [National Commission for Certifying Agencies \(NCCA®\)](#). NCCA Accreditation is an impartial, third-party validation that the CPI program has met recognized national and international credentialing industry standards for development, implementation, and maintenance of certification programs. The Academy of Clinical Research Professionals (the Academy) develops the CPI exam using certification industry best practices, as aligned with the NCCA Standards for Accreditation of Certification Programs.

In following these best practices, the Academy conducts a Job Analysis Study every five (5) years to ensure content validity of the CPI Examination. Program content validity is demonstrated with a comprehensive job analysis conducted and analyzed by experts, with data gathered from practitioners within the profession. The process utilizes knowledge and task focused guidelines to assess clinical research professionals' competence and determine the level of importance and frequency of specific knowledge and tasks required to perform in the role of a clinical research associate.

## Using the CPI Detailed Content Outline (DCO)

The CPI DCO was constructed from the results of the most recent (2019) Job Analysis Study. The results of the study provided the framework for the knowledge and tasks important to the role of a CCRC and therefore the content of the CCRC Exam. To be certified, a CRC is expected to have proficiency in the six (6) main content areas of clinical research, displayed in the chart below. The percent of questions dedicated to each content area are provided.

	<b>Content Areas</b>	<b>Percentage of Items on Exam</b>
I.	Scientific Concepts and Research Design	18%
II.	Ethical and Participant Safety Considerations	24%
III.	Product Development and Regulation	13%
IV.	Clinical Trial Operations (GCPs)	21%
V.	Study and Site Management	14%
VI.	Data Management and Informatics	10%
	<b>Total</b>	<b>100%</b>

Certified Principal Investigators (CPIs) are expected to have general knowledge of:

- laboratory terminology, tests, and procedures
- basic math, including adding, subtracting, multiplying, dividing, and calculating percentages

The specific knowledge and tasks identified as important are provided in the CPI DCO, below. Therefore, to prepare to take the CPI Exam, one should study this outline and especially consider the underlying knowledge, skills, and abilities needed to perform as a CPI. It is recommended that an eligible CPI Exam candidate use this outline to identify knowledge gaps for constructing a relevant preparation plan.

## Certified Principal Investigator (CPI®) Examination Detailed Content Outline

(Effective October 2019)

As defined by the most recent ACRP Job Analysis Survey, a CPI® shall have proficient **knowledge** in the following six (6) content areas of clinical research. A PI typically uses this knowledge to perform the **tasks** listed (last column).

<b>Domain I – Scientific Concepts and Research Design – 18% of exam</b>	
<b>Knowledge Statements</b>	<b>Tasks</b>
Elements of an Investigational Brochure (IB) and/or investigational device use (instructions for use)	<ul style="list-style-type: none"> <li>• Develop the protocol (e.g., inclusion/exclusion criteria, procedures, schedule of events, safety and efficacy parameters, hypothesis generation)</li> <li>• Evaluate protocol for scientific soundness (e.g., risk, benefit, validity of study procedures, endpoints)</li> <li>• Evaluate protocol for feasibility (in terms of practicality of execution, not site-specific considerations)</li> <li>• Review background information (e.g., study concept, product development plan, IB, target product profile, mechanism of action)</li> <li>• Identify and/or explain study design</li> <li>• Identify the expected or unexpected results associated with investigational products</li> <li>• Critically analyze and/or explain study results (e.g., journal article, IB, clinical study report)</li> </ul>
Elements of a protocol	
Study objective(s) and end points/outcomes	
Elements of, and rationale for, subject eligibility requirements	
Investigational product characteristics (e.g., mechanism of action, stability, etc.)	
Statistical principles (e.g. confidence interval, study power)	
Study design characteristics (e.g., double-blind, crossover, randomized)	
Treatment assignments (e.g., randomization, open label)	
Supplemental/rescue/comparator/placebo product(s) in study design	
<b>Domain II – Ethical and Participant Safety Considerations – 24% of exam</b>	
<b>Knowledge Statements</b>	<b>Tasks</b>
Protection of human subjects	<ul style="list-style-type: none"> <li>• Identify the safety and expected therapeutic effects of the IP by verifying the preclinical and clinical research performed to date (using the IB)</li> <li>• Develop, manage, and/or implement ethical recruitment and retention strategies</li> <li>• Develop, modify, and/or review informed consent form</li> </ul>
Vulnerable subject populations	
Confidentiality and privacy requirements	
Conflicts of interest	
The IB (e.g., safety information, toxicology, literature review, guidance to the investigator)	
Recruitment and retention strategies	
Elements of the informed consent form	

# ACADEMY

OF CLINICAL RESEARCH PROFESSIONALS

Informed consent process requirements	<ul style="list-style-type: none"> <li>• Conduct prescreening activities with potential study subjects according to SOPs</li> <li>• Screen trial subjects according to protocol and ICH guidelines</li> <li>• Comply with subject privacy regulations (e.g. report data breach)</li> <li>• Ensure adequate informed consent and documentation (incl. vulnerable populations such as inmates, children, pregnant women, etc.)</li> <li>• Develop, ensure and/or oversee study education plan and/or tools for subjects</li> <li>• Ensure and document follow-up medical care for study subjects, as applicable</li> <li>• Assess, manage, and/or review subject laboratory values, test results, and alerts</li> <li>• Differentiate the types of adverse events that occur</li> <li>• Implement plan of action for management of adverse event(s) [e.g., stop investigational product, retest, treat subject]</li> <li>• Assess AE causality, severity, and seriousness</li> <li>• Maintain follow-up to determine resolution of adverse event(s)</li> <li>• Verify appropriate reporting and documentation of adverse event(s)</li> <li>• Ensure timely review of safety data</li> <li>• Assess subject safety during study participation (e.g. protocol deviation)</li> <li>• Oversee the management of safety risks (e.g., clinical holds, product recalls, product contamination)</li> <li>• Conduct unblinding procedures as applicable</li> <li>• Document reasons for subject discontinuation/withdrawal/termination (e.g., adverse event, family emergency, subject preference)</li> <li>• Identify and/or address potential ethical issues involved with study conduct</li> <li>• Identify and report potential fraud and misconduct</li> </ul>
Initial subject eligibility requirements (e.g., inclusion, exclusion criteria)	
Blinding/unblinding procedures	
Safety monitoring	
Adverse events classification, documentation and reporting	
Subject discontinuation or withdrawal criteria/procedures	
Protocol deviation/violation identification, documentation, and reporting processes

OF CLINICAL RESEARCH PROFESSIONALS

	<ul style="list-style-type: none"> <li>Inform study subjects of trial risks, modifications, and results, in accordance with regulatory requirements</li> </ul>
<b>Domain III – Product Development and Regulation – 13% of exam</b>	
<b>Knowledge Statements</b>	<b>Tasks</b>
Product development process (e.g., non-clinical, clinical trial phases, device class)	<ul style="list-style-type: none"> <li>Comply with regulatory requirements (e.g. IRB/IEC)</li> <li>Identify the role and proper composition of regulatory bodies (e.g. IRB/IECs)</li> <li>Prepare and/or submit documents for regulatory bodies (e.g. IRB/IEC) and/or sponsor review/approval</li> <li>Ensure regulatory body (e.g. IRB/IEC) review/written approval of study and study documents</li> <li>Timely inform the sponsor and regulatory body (e.g. IRB/IEC) of any deviations from the protocol and document as appropriate</li> <li>Prepare or review study summary and/or close-out letter for regulatory body (e.g. IRB/IEC)</li> <li>Evaluate need to modify/terminate study based on efficacy, safety, or logistical concerns</li> <li>Ensure compliance with study requirements and regulations</li> <li>Submit documents to regulatory bodies as applicable</li> <li>Develop, update, and/or review the Investigators’ Brochure</li> <li>Prepare for and/or participate in audits and inspections</li> <li>Respond to or facilitate response to audit/inspection findings</li> <li>Follow standards for handling hazardous materials (e.g., International Air Transport Association (IATA))</li> </ul>
IRB/IEC role, composition and purpose	
IRB/IEC reporting requirements	
Regulatory reporting requirements	
Submission and approval process (e.g., protocols, protocol amendments, ICFs, ICF amendments, IB, and IB amendments)	
Local reporting requirements	
Elements of fraud and misconduct	
Audit and inspection processes (e.g., preparation, participation, documentation, and follow-up)	
Significant milestones in the evaluation of efficacy and safety (e.g., interim analysis result, DSMB review)	

# ACADEMY

OF CLINICAL RESEARCH PROFESSIONALS

<b>Domain IV – Clinical Trial Operations (GCP) – 21% of exam</b>	
<b>Knowledge Statements</b>	<b>Tasks</b>
Project feasibility assessment (e.g. site demographics, patient populations, staff and equipment)	<ul style="list-style-type: none"> <li>Evaluate site for study feasibility</li> <li>Supervise coordination of protocol and/or protocol amendments through appropriate approval processes (e.g., IRB/IEC, sponsor, regulatory authorities)</li> <li>Ensure consistency between the sites' standard operating procedures (SOPs) and the study requirements</li> <li>Select qualified investigational staff</li> <li>Delegate study-related roles and responsibilities as appropriate</li> <li>Develop and/or participate in protocol training</li> <li>Identify issues requiring protocol amendments</li> <li>Implement protocol amendments after appropriate approval</li> <li>Ensure investigator/site protocol compliance</li> <li>Document and/or follow up on site visit findings</li> <li>Implement and assure quality management system</li> <li>Create, document, and/or implement corrective and preventive action (CAPA) plans</li> <li>Prepare, conduct, and/or participate in monitoring visit(s) (e.g., close-out, pre-study, interim, risk-based)</li> </ul>
Principal investigator responsibilities (e.g. safety, quality, data integrity)	
Indemnification/insurance requirements	
Delegation of duties	
Staff training requirements (both protocol and non-protocol-specific)	
Site initiation activities	
Staff oversight	
Principles of study monitoring (e.g., risk based, full SDV, remote, reporting requirements, etc.)	
Principles of quality management system (including CAPA plans)	
Communication documentation policies (e.g., telephone, email, mail, written verification of oral instructions, etc.)	
Subject compliance assessment	
Site close-out activities	
<b>Domain V – Study and Site Management – 14% of exam</b>	
<b>Knowledge Statements</b>	<b>Tasks</b>
Roles of various clinical trial entities and local ordinances (e.g., CROs, sponsors, regulatory bodies, IRB, fire regulations, building codes, SMOs, PHC, data management and coordination center, etc.)	<ul style="list-style-type: none"> <li>Ensure vendors are qualified (e.g. obtain lab certification/licensure)</li> <li>Facilitate site budget/contract approval process</li> <li>Obtain, verify, negotiate, and/or manage site/ investigator indemnification/ insurance</li> <li>Prepare, conduct and/or participate in study</li> </ul>
Elements of a study budget	
Contract budget negotiations and approval process	
Study timelines (preparatory, during, and post)	

# ACADEMY

OF CLINICAL RESEARCH PROFESSIONALS

Investigational product reference materials (e.g., Investigational Brochure, instructions for use, user manual)	<ul style="list-style-type: none"> <li>initiation activities</li> <li>Plan, conduct, and/or participate in training of the investigational staff (e.g. safety, protocol)</li> <li>Schedule/perform/oversee subject visits as appropriate</li> <li>Educate subjects on proper use of investigational product</li> <li>Assess subject compliance</li> <li>Re-evaluate recruitment strategy as needed</li> <li>Ensure and maintain appropriate staff, facility, supplies, and equipment throughout study (e.g. calibration, case report forms, retention sampling)</li> <li>Identify site issues and recommend corrective actions</li> <li>Comply with randomization and blinding/unblinding procedures for investigational product (including initial assignment and ongoing maintenance)</li> <li>Ensure proper IP management (e.g. preparation, storage, dispensing, handling, disposition, accountability, recall, retention sampling, and reconciliation)</li> </ul>
Investigational product storage and shipment	
Investigational product accountability and documentation requirements	
Equipment and supplies use and maintenance (e.g. calibration schedules, expiration dates)	
Sample collection, shipment, and storage requirements	
Subject responsibilities for study participation	
Subject visit activities	
IT infrastructure needs (e.g., validation, electronic signatures, audit trail)	
Purpose of and process(es) for protocol compliance (e.g., regulatory requirements, data integrity)	
<b>Domain VI – Data Management and Informatics – 10% of exam</b>	
<b>Knowledge Statements</b>	<b>Tasks</b>
Essential documents for the conduct of a clinical trial (e.g., contents of trial master file)	<ul style="list-style-type: none"> <li>Ensure proper source documentation</li> <li>Review and approve completed eCRF/CRF</li> <li>Identify, verify, and/or maintain Essential Documents required for study conduct</li> <li>Collect, record, and report accurate and verifiable data (e.g., weight bills, certificate of analysis, study-related logs) by use of appropriate data acquisition methods (e.g., analogue, digital)</li> <li>Ensure timely review of study data</li> <li>Timely perform or supervise query resolution</li> <li>Ensure compliance with electronic data requirements (e.g., passwords and access)</li> </ul>
Elements and purposes of data collection tools (e.g., eCRF, EDC)	
Data privacy principles (e.g., redacting and blinding personal information, background checks)	
Study documentation practices (e.g., accurate, complete, timely, legible, dated, and identification of the trial)	
Source data review (SDR) and source data verification (SDV) purpose and process	
Data management principles (e.g. security, backup) and tools (e.g., IWRS, IVRS)
